

### Benefits

- On-demand, guaranteed availability
- Pay-as-you-go pricing models
- Improved transparency of the cost of backup services
- Strict environment controls and protection
- Free infrastructure support team
- Access anywhere, any-time
- No Capital expenditure

Backing up data is crucial for safeguarding your business yet in itself adds little to no direct value. Quintica's Cloud based Backup Service (BaaS) offers automated, secure and dependable online backup and recovery, helping your Business to protect its data whilst eliminating the costs and risks associated with manual or onsite backup procedures, enabling you to focus your time and resource on activities that do add value to the Business.

### Solution Architecture:

The cloud computing architecture allows Quintica to offer infrastructure services on a utility, "pay-as-you-go" basis. This approach negates the need to make large (CAPEX) investments in IT infrastructure. Payment is month by month (OPEX) and for only the infrastructure you use and need.

Quintica offer a range of solutions, tailored to cater for the full range of requirements from single workstations to backing up the full enterprise environment.

### QuickVault Client software

QuickVault Client software runs on any Windows, Linux or MAC machines that need to be backed up. This software compresses and encrypts the information to be backed up. The local user is able to control what is backed up and what is restored from the user interface.

Through installing QuickVault Client software on any machine on your LAN data can be backed up from any machines across your network. The data is then packaged and transfers to our remote, secure cloud.

### Onsite Quintica QuickVault Appliance (Quick Recover)

Quintica's QuickVault Appliance is placed on-site to act as a proxy for data collection and to provide quick recovery capabilities.

The onsite unit gathers all the required information from across your network, compresses the data, encrypts it and securely replicates the information to the Quintica cloud whilst maintaining a local copy of the data that can be used for quick recovery.

### Facilities:

Quintica's data centre facility features comprehensive physical security, UPS, emergency backup generators, and fire Suppressant systems, ensuring your data remains safe at all time. Quintica have adopted a 'Green Computing' strategy for managing the data center, giving you piece of mind that your data is not only safe but managed responsibly.

### Supported Environments

The reality is that we can back up just about anything. That is why such a service is of interest to so many people. There are no extra costs if you have a unique environment. Scan the list below and chances are you'll find your environment. If not, talk to us and we'll clarify things for you.

- Windows environments
- VMware
- XenSource
- MS-SharePoint

- MS-Exchange
- MS-SQL
- SAP
- Oracle
- DB2
- PostgreSQL
- Lotus Notes and Domino
- GroupWise
- MySQL
- Linux
- Unix
- Novell
- OS X
- System-I

### Agent-less Advantage

The Quintica solution, based on our QuickVault technology is an "agent-less technology". Simply put this means that there is no requirement to load software onto the equipment that is being backed up.

Our agent-less architecture assures no disruption to any service for implementation or upgrades; no security risk because of an open agent port that can be hacked; no server cycles being wasted for agent software.

The financial benefits of agent-less technology are considerable as you're not licensed by device but instead simply by the storage space you use.

### Quick Vault Advanced Modules overview

Quintica's solution comes with easily enabled modules that enhance the total backup experience. These modules offer additional software functionality that supplements the core backup/restore capability of the overall solution. Modules are licensed separately.

### Backup Lifecycle Management (BLM)

Every business stores data of varying importance. Nonetheless, low importance data or dormant files are often included in backup procedures and stored for significant periods of time on expensive storage space.

The Quick Vault online disk-based storage maintains critical data, while the BLM module allows you to archive data for the long term, either for cost or for regulatory compliance reasons.

Saving you money while still ensuring the data is protected.

### Autonomic Healing

A veritable network immune system, this module constantly scans your system and immediately creates an alert when it encounters a corrupted or otherwise problematic file.

**Telephone:**  
+254 20 444 2900

**Email:**  
[sales.ke@quintica.com](mailto:sales.ke@quintica.com)

Autonomic healing detects any corruptions (both data corruptions and logical inconsistencies) and generates an alert so that support staff can fix the problem before it impacts your Business.

#### LAN Storage Discovery

Through analyzing the distribution and type of data across stored across your LAN, LAN Storage Discovery enables you to optimize and better manage your backup procedures, alleviating unnecessary costs associated with storing non-essential data.

#### Optional Extras

Local Storage Restore  
Web Portal  
Replication DS-System  
DS-Recovery Tools  
DS-System Monitoring  
DS-Client Monitoring  
Disc / Tape Module

#### Related Services

Disaster Recovery  
Storage-as-a-Service

#### About Quintica

Quintica is a quality driven, consulting, education, technology and managed service provider. We assist companies to meet their business objectives by understanding and bridging the gap between their defined strategy and operations.

We ensure the correct people, processes (operational & support) and technology are in place to support and deliver the key services your Organisation depends on; this is done using our proprietary methodology, the Q-Journey.

The Q-Journey is based on international standards and frameworks and is delivered through a collaborative approach to ensure the highest level of quality is maintained.

The Q-Journey focuses on helping Organisations manage their COSTS, CASH and CUSTOMERS to ensure long term business sustainability and covers the full spectrum from consulting and training to implementation and cloud computing services.

Quintica was founded in 2001 with a remit to create a classic Service Management company. In 2009, Quintica and the Eaton Group, a telecommunications infrastructure provider, saw an opportunity to extend an existing and very successful joint venture and the two companies merged.

Quintica has developed its business based on four core services; Information Technology, Business Management, Human Resources and Customer Relationship Management, each of which shares an objective to achieve and maintain global standards. Through these services we enable our clients to enhance their business, manage cash-flow, reduce their costs and attract new customers, resulting in businesses which stand head and shoulders above the competition.

To deliver our promise, we access the widest array of specialist expertise. Our approach is a collaborative and consultative one, with no pre-subscribed solution, but rather a bespoke creation deployed to suit your specific requirements based around our methodology.
